

# Fire Extinguisher Equipment & Services

## ▼ VANGUARD FIRE EXTINGUISHERS FOR EVERY HAZARD

Vanguard Fire & Security Systems, Inc. began providing and servicing fire extinguishers over 50 years ago, and remains at the forefront of the industry today. As testimony to our leadership position in the industry, Vanguard even provides code-required testing services to other Fire Extinguisher Service companies.

When it comes to fire extinguishers, two primary considerations are vital to protecting your facility. First, do you have the right type of extinguisher for the hazards present in your facility? Hazards and extinguisher technology both change over time, making it important to review your needs frequently. Secondly, are your extinguisher inspections (required by code) providing you with the level of assurance and peace of mind that they are thorough, complete, and improving your facility safety program?

Vanguard, at no cost to you, can show you the code required activities that need to be completed at regular intervals to be in compliance with NFPA and your local Authority Having Jurisdiction (AHJ—often your Fire Marshal.)

We look forward to helping maintain your facility Fire Extinguishers.

## ▼ MONITORED EXTINGUISHERS

Vanguard offers the latest technology for electronic monitoring of fire extinguishers.

This NFPA compliant system eliminates costly manual inspections while improving overall facility safety.

Vanguard can demo this new technology at your convenience.

## ▼ VANGUARD LEADS THE WAY WITH INSPECTION TECHNOLOGY

Vanguard has implemented the industry's most robust technology solutions for inspecting fire protection equipment, including extinguishers. This technology results in 24/7 access to your inspection reports, NFPA citations for any deficiencies, the ability to track your upcoming equipment servicing needs, and exacting

detail of work performed on your extinguishers. Beyond the technology, Vanguard has added staff that have successfully implemented and managed the technology for hundreds of customer accounts—contact us today to learn how this technology can benefit your facility.

## ▼ NFPA 10 CERTIFIED TECHNICIANS

Vanguard Technicians meet or exceed the requirements of NFPA 10. NFPA 10 requires those who maintain, service, and recharge portable extinguishers be certified and have the appropriate service manuals; the proper tools, recharge materials, and lubricants; and the appropriate replacement parts for the fire extinguisher.

This code change is relatively recent and is one method customers can use to evaluate the skill set of technicians servicing their fire equipment.
